ABOUT WRIGHTZONE

Established in 2002, the WrightZone company built itself on a foundation of sincerity, respect, commitment, and trust. We are a team of entrepreneurs, motivators, trainers, and achievers. We focus on providing affordable software solutions to increase your sales, reduce costs and automate and/or integrate your company business processes and systems.

Weighbridge Industries

A commercial software solution for the weighing industry

- Logistics
- Forestry
- Mining
- Waste Management

Testimonial

The WZ Weighbridge has performed as we hoped, the installation was easier than expected, the level of support from WrightZone to date has been exemplary and the software and the vendor have met or exceeded the search criteria.

Weighbridge Software

TECHNOLOGY

The platform of our technology has enabled us to create applications that emulate the touch-first experience that lies at the heart of Microsoft Windows 8 and 10. Although beautiful and feature-rich, our weighbridge software is primarily built for speed and performance regardless of data complexity or size.

User controls are powered by a server-side data processing engine so that regardless of the dataset size, users can shape and analyse information at lightning speeds without sacrificing features or capabilities.

MULTI-MASTER DATABASE

WrightZone Weighbridge Software, with the multi-master database, lets you declutter your business applications for quicker processing and more organised storing of information.

For enterprise customers the multi-master database replaces excess business applications offering a de-centralised architecture in which updates to copies of a database can be maintained even if one of the computers in the network ceases to function.

Multiple users are supported with each WZWB client inputting or reading their information to the local multi-master database.

Multiple users can process information simultaneously decreasing unnecessary delays and creating business efficiency.

- Multi-Weighbridge
- Multi-Site
- Multi-Location
- Multi-User
- On a robust multi-master database that delivers enterprise-level high availability, scalability, and security.

Software Development

WHAT

WrightZone consultants and software developers create tailor-made software when your business requires a distinctive solution.

WHY

WrightZone knows that sometimes a custom solution is needed. Our talented team of software developers and consultants specialise in creating unique software that is easy to implement, easy to use, and reliable. Our custom solutions are often developed to remove costly investment requirements and to create more customised analytic and reporting features.

HOW

We employ the 4D methodology:

Define | Design | Develop | Deploy.

The 4D methodology allows us to involve you in the key planning stage to properly analyze and understand your needs which can considerably reduce your development costs. From there, we get down to business and let you get back to yours.

Committed Consulting

BUSINESS CONSULTING

At the WrightZone we believe in Committed Consulting. Committed Consulting means our software success is measured only by the quality of our professional service.

BUSINESS ANALYSIS

We produce a detailed Scope of Service (SOS) that offers everything you need to know about the project, your objectives, and outcomes. It's this documentation that forms the foundation of your cost-effective software solution, and project success.

PROJECT MANAGEMENT

Our project management is about committing to achieving each and every project goal and objective on time and within budget.

KNOWLEDGE SHARING

Exchanging information, skills, and expertise for the purpose of delivering solutions to problems across the full spectrum of your business operations is our commitment to you.
